If the chart does not list your application, just measure the diameter of the shaft and count the total number of individual splines. If there is a flat, count half of the splines and then double that number.

Note: Use the Reference Application Chart to select the proper steering column shaft size for your system. If the chart does not list your vehicle application, then measure your column's output shaft. If it is a DD shaft (two rounds and two flats), then measure the rounds - it will either be a 1" DD or $3 / 4$ " DD. If there are splines, then measure the diameter of the shaft and count the individual splines.
